

ASP FACTS

FEATURE: **Electroless®**

ADVANTAGE:

No other commercially available metal finish approaches the total corrosion resistance of Electroless Nickel. Designed for industrial applications in a maritime environment, Electroless provides increased surface hardness, lubrication and a matte finish. It will not scratch, rust or wear. Electroless Batons have the appearance of stainless steel. The finish is ideally suited to maritime and other high humidity applications.

SPECIFICATION:

- Total corrosion protection
- Stainless steel appearance
- Increased surface hardness
- Ideal for maritime applications

PERFORMANCE:

Electroless Batons are well suited to maritime and other high humidity environments. The nature of the finish simplifies maintenance. Electroless Batons give the "quietly attractive" appearance of stainless steel. The matte finish has an enhanced psychological advantage at night. They are the most maintenance-free batons of all ASP models. The finish of the baton can be maintained through use of a Scotch Brite® pad.

SALES STRATEGY:

Compare the attractive stainless steel appearance of Electroless Batons with other expandables on the market which offer less corrosion protection.
