

ASP FACTS

FEATURE: Ceramic Pins

ADVANTAGE:

The gasket system around vehicle windows provides a protective cushion that prevents breakage. Trying to shatter a window to extract an occupant is extremely difficult. A baton or hammer will bounce off if not precisely placed. A push punch or spring breaker carries the hand into the broken glass. The three precision ground ceramic pins of the BreakAway will shatter window glass from any angle. It provides positive window breakage in any tactical environment.

SPECIFICATION:

- Low profile
- Adds less than .75" to the baton length
- Precision machined
- 6061 T6 aerospace aluminum
- Matte black hardcoat anodized
- Attaches to existing ASP Batons
- Geodome radiused pin platform
- Three custom molded ceramic pins
- Positive pin contact from any angle
- Accepts existing ASP baton caps:
 - Tactical (steel or aluminum)
 - Logo
 - Grip
 - Leverage
 - Tactical Triad LED
 - Tactical Defender OC
- Provides protective pin coverage

PERFORMANCE:

Install the BreakAway between the ASP Baton handle and the baton cap. To use, remove the baton cap. Strike a vehicle side or back window from any tactically sound angle. The front window of a vehicle has an inner layer of laminated plastic. To break a front window, make a series of strikes in a circle. Then break out the circle.

SALES STRATEGY:

Show how the BreakAway attached to any ASP Baton and covers the pins with the existing baton cap. At a salvage yard, demonstrate the positive window breaking capability of the BreakAway.

WARNING: Always wear Kevlar gloves and eye protection when using the BreakAway.
