

## FEATURE: Elastic Technology

### ADVANTAGE:

Embedded elastic side panel technology results in a carrier that is compact, flexible and secure. Heavy gauge shoe elastic minimizes the bulk of the case versus constructed side walls. The elastic expands to accommodate a range of product dimensions. Each item is under constant tension and is held securely in place.

### SPECIFICATION:

- Genuine leather
- Heavy gauge shoe elastic
- Custom widths
- Embedded between the case body and liner
- Concealed ends
- Compact design
- Reduced bulk
- Accepts a range of product dimensions (Chain, Hinge or Rigid Cuffs)
- Items always under tension
- Increased security

### PERFORMANCE:

Elastic Technology cases are compact, taking up less room on the belt. They expand to secure an entire range of product sizes. Because products are under constant tension, Elastic Technology cases provide more secure retention than traditional carriers. Velcro closure cases will not pop open during a confrontation.

### SALES STRATEGY:

*Show the neat, clean construction of embedded elastic side panels. Demonstrate the range of sizes that the cases accept. Show the constant tension that products are under when in the cases. Illustrate the increased security of the carriers.*
