

ASP[®] FACTS

FEATURE: Lens Down Light Carry

ADVANTAGE:

The TLC Tactical Light Case secures the Triad and Turbo Series of flashlights on a military, duty or dress belt as well as on MOLLE vests. The carriers rotate to 7 distinct positions. A Triad may be rapidly presented, yet is retained during dynamic confrontations. Lights are carried lens down.

SPECIFICATION:

- Injection molded polymer
- 7 rotating positions
- Opposing internal retention orbs
- Recessed hex tool
- Belt width adjustment bar
- Snap-on
- Adjustable
- Lens down carry

PERFORMANCE:

The TLC carrier retains all variations of Triad and Turbo flashlights (AA, CR, Poly and USB). The belt loop adjusts to military, duty and dress belt widths. Removing the adjustment bar allows attachment to a MOLLE vest. The case securely snaps into place, yet is easily repositioned or removed. The light is presented in a natural movement with a secure hold on the grip. The bezel down carry protects the lens.

SALES STRATEGY:

Explain how the hex tool is removed from the belt loop of the TLC with the double lock pin of a handcuff key. Show how the belt adjustment bar is repositioned. Demonstrate the secure retention of a Triad light by the TLC. Snap the Tactical Light Case onto a belt or MOLLE vest.
