

ASP FACTS

FEATURE: Loosen & Lock

ADVANTAGE:

Loosen & Lock is a major design feature of ASP Tactical Handcuffs. A cuff that tests too tight can be unlocked, loosened and then double locked again without removing the key from the Lock Set.

SPECIFICATION:

- Turn the key toward the bow
- First unlock the double lock
- Then unlock the single lock
- The bow will spring to its acceptable tightness
- Reversing the key relocks the double lock
- The key need not be removed to double lock

PERFORMANCE:

The Loosen & Lock feature allows an officer to safely adjust a cuff that tests too tight. The double lock can be removed, the single lock released, then reset and the double lock reapplied without removing the key from the keyway.

SALES STRATEGY:

Compare an ASP Tactical Handcuff to any other design on the market. Demonstrate how a cuff which tests too tight can be unlocked, adjusted and double locked without removing the key from the keyway.
