

ASP FACTS

FEATURE: Pull Open Handcuffs

ADVANTAGE:

Handcuff Training requires repetition to master basic skills. The design of ASP Training Cuffs permits field quality restraints to be applied exactly as on the street. However, the Lock Set of these handcuffs allows the student to rapidly remove the cuffs for re-application. The restraint dramatically increases the number of possible training sequences. When the cuffs are double locked, removal procedures can be trained. To assure identification as Training Handcuffs, both the restraints and the Lock Set are color coded red.

SPECIFICATION:

- Stainless steel frame
- Polymer overmold
- Chain, Hinge or Rigid
- Rotary release
- Functional double lock
- Red overmold
- Red Lock Set

PERFORMANCE:

Training Handcuffs are applied using standard Rock & Lock techniques. The cuffs can be immediately released as "subjects" rotate their wrists. Once double locked, standard uncuffing techniques can be trained. Training Handcuffs are identified by their red overmold and red Lock Set.

SALES STRATEGY:

Explain the Rock & Lock handcuff technique. Show the red overmold and red Lock Set of Training Handcuffs. Demonstrate the rotary release of Training Cuffs. Apply the double lock and demonstrate standard uncuffing techniques.
